LEDQUAD

A recessed rectangular LED lighting solution

An infilled reinforced luminaire frame incorporates the high-performing LEDs and secondary optical solution and electronic gear of the LEDQUAD.

The ceiling trim is manufactured from pressed metal for rigidity and is pre-coated with iron phosphate against rust before being finally coated with UV block hybrid polyester powder pigment and thereafter oven baked at 210°C.

The LED secondary optics are made of high-quality PMMA and offer a variety of usage in application fields of retail, corridor and shelf lighting and provide a superior photometric distribution resulting in high spacing to mounting height ratios and low glare ratings. This, in conjunction with most advanced LED technology, will offer a highly efficient photometrical solution with up to 50,000hrs (L70B10).

Tolerance on LED flux is ± 7% and on total luminaire power ± 5%

^(*) The nominal flux is an indicative LED flux @ Ts 85°C based on LED manufacturer’s data. The real flux output of the luminaire depends on environmental conditions (e.g. temperature and pollution) and the optical efficiency of luminaire. The type of LED used is subject to change due to the ongoing rapid progress taking place in LED technology.
