

FutureProof

Smart Upgradability

Since LED technology is constantly evolving, Schröder has developed upgradable lighting solutions.

All Schröder luminaires already benefit from the latest developments in electronics, photometry, materials and of course, LEDs. In addition, they are designed so that they can be easily adapted to house LEDs yet to come.

Both the photometric engine and the electronic assembly can be replaced at the end of the LEDs' lifespan to take advantage of future technological developments.

This FutureProof concept by Schröder, highlights the desire to offer solutions that will last over time and that will adapt to technological changes.
